

vengeanceaiUSCMODEL11 — Assumptions List

Ticker: FICO. Plain list only (no charts). Each item includes What / How / Why / Source. Download URL: https://raw.githubusercontent.com/vengeanceaiUSC/Rainmaker/cursor/vengeanceaiusmodel11-d3ac/FICO/output/MODEL11_FICO_ASSUMPTIONS_LIST.pdf

Exit context: BASE 17.5x EV/EBITDA (peer median ~18.1x; bull 25.0x; bear 12.8x). WACC ≈ 9.24%.

Working Capital uses segment cash-conversion DSOs blended by FY2025 10-K revenue mix (SaaS, on-prem software, B2C myFICO, B2B Scores, Professional services). $NWC = AR + Inventory - AP - \text{Deferred Revenue (output)}$; $\Delta NWC = NWC_t - NWC_{t-1}$. Mix percentages offset within Total Revenue — they do not add a second revenue stack.

FY2025 10-K disaggregation (\$000s): B2B Scores 948,595; B2C myFICO 219,980; SaaS software 419,720; on-premises software 320,425; Professional services 82,149 (sum = Total revenues 1,990,869). FICO Platform ARR was \$263.6M (35% of software ARR) at 9/30/2025 — ARR is a KPI, not an incremental IS line. SaaS/on-prem billings create Deferred Revenue (contract liability); B2C is near-zero DSO (card-settled); B2B Scores use ~30-day trade terms; Professional services convert cash quickly but at much lower gross margin (~28% vs software/scores).

Deferred Revenue is an explicit Balance Sheet liability included in Total Liabilities and in NWC (= AR+Inv-AP-Deferred). Forecast Deferred = Total Rev × (SaaS% + OnPrem%) × (FY25 Deferred ÷ FY25 software revenue). Only software subscription / maintenance billings drive the liability — Scores and myFICO are not double-counted into Deferred.

D&A; is forecast as a % of Revenue (3yr FY23–25 average of total DepreciationDepletionAndAmortization / Revenue ≈ 0.84%), not a PP&E-only; rate — capturing software amortization and intangibles.

Stock-Based Compensation is added back in CFO and FCFF at the 3yr average SBC/Revenue (≈ 8.25%) from ShareBasedCompensation in the 10-K cash flow. DCF shares outstanding grow each year by SBC\$ / share price so Equity Value/Share reflects dilution from the SBC add-back.

Starting diluted shares (D12) roll forward each forecast year: $\text{Shares}_t = \text{Shares}_{t-1} + \text{SBC}_t(\$000s) / \text{Current Price}$. SBC\$ comes from 3-statement row 64 (Rev × 8.25% SBC). Terminal Equity Value/Share uses Year-5 diluted shares, not the static starting share count.

CapEx uses a flat 3yr average of (PPE purchases + capitalized software) / Revenue (≈ 1.25%). The prior hardcoded fade to 1% was removed so reinvestment reflects actual history rather than forcing CapEx ≈ D&A; by Year 5.

DCF unlevered cash taxes use the 3yr average cash tax rate ($\text{IncomeTaxesPaidNet} \div \text{EBT} \approx 22.87\%$), not the book effective tax rate. The 3-statement income statement still applies book tax for NI.

Financing CF restores realism outside FCFF: debt uses the 3yr average net debt cash flow (senior-note proceeds – line-of-credit repayments ≈ -\$291M/yr). Equity buybacks distribute residual levered FCF after that debt CF so cash does not artificially stockpile (historical buybacks averaged ≈ \$881M/yr in FY23–25).

Balance sheet identity is enforced every year: Equity Capital = Total Assets – Total Liabilities – Retained Earnings (hard plug). Total Liabilities = AP + Debt + Deferred Revenue. Row-3 Balance Sheet Check flags any residual ≠ 0.

Primary filings hub: <https://investors.fico.com/financial-information/sec-filings> — segmentation derived from the FY2025 10-K disaggregated revenue notes (<https://www.sec.gov/Archives/edgar/data/814547/000081454725000030/fico-20250930.htm>; IR copy <https://investors.fico.com/static-files/663245db-39a2-4db7-8f89-284034bbccbf>).

A. Three-Statement Forecast Assumptions

Row 7: Revenue Growth

What it is: Year-over-year % increase in revenue for each forecast year.

How set in model: Yellow POLICY input: 27% / 16% / 13% / 10% / 7%.

Why this choice: Y1 ≈ company FY2026 revenue guidance (~\$2.53B / FY25 \$1.991B – 1 ≈ 27%). Then fade toward terminal g=3% (not straight-lined). This is the main forward-looking judgment; it drives Rev → GP → EBT → Net Earnings → CF.

Source: SEC EX-99.1 Q3 FY2026 — updated FY2026 revenue guidance \$2.53B

Source URL: <https://www.sec.gov/Archives/edgar/data/814547/000081454726000031/exhibit991erq32026.htm>

Row 8: COGS % of Revenue

What it is: Cost of revenues as a % of sales (gross margin = 1 – this).

How set in model: Excel equation: =J\$122 blended COGS from segment GMs (≈ 17.60%; calibrated near FY25 ~17.8%).

Why this choice: MODEL11: COGS reflects segment margin mix — B2B Scores high GM, SaaS/on-prem high GM, Professional Services much lower GM (~28%). Mix % offset within Total Revenue (not a second revenue stack).

Source: SEC 10-K FY2025 — Note 9 / MD&A; disaggregated revenue + Cost of revenues

Source URL: <https://www.sec.gov/Archives/edgar/data/814547/000081454725000030/fico-20250930.htm>

Row 9: SG&A; % of Revenue

What it is: Operating opex (SG&A;) as % of sales.

How set in model: Equation: $\text{MAX}(15\%, (I28 - 10,922)/I24 - 75\text{bps} \times \text{year})$. Strips FY25 restructuring; then -0.75% of sales each year.

Why this choice: MODEL11: restore software operating leverage. Floor 15%; grind -75 bps/yr so SG&A; can scale toward mid-teens as revenue expands (not stuck ~24–25%).

Source: SEC 10-K FY2025 — SG&A; + restructuring note

Source URL: <https://www.sec.gov/Archives/edgar/data/814547/000081454725000030/fico-20250930.htm>

Row 10: R&D; % of Revenue

What it is: Research & development expense as % of sales (IS label: R&D;, not Rent).

How set in model: Excel equation: $I29/I24$ held flat (~9.46%).

Why this choice: FICO reinvests steadily in analytics/software. Flat % grows dollars with revenue.

Source: SEC 10-K FY2025 — Research and development

Source URL: <https://www.sec.gov/Archives/edgar/data/814547/000081454725000030/fico-20250930.htm>

Row 11: D&A; % of Revenue

What it is: Total depreciation & amortization as % of sales (software-industry driver).

How set in model: Yellow POLICY input: flat 0.84% (3yr FY23–25 avg). Forecast $\text{DA\$} = \text{Revenue} \times \text{DA\%}$.

Why this choice: MODEL11: D&A; is forecast as a % of Revenue (3yr FY23–25 average of total DepreciationDepletionAndAmortization / Revenue $\approx 0.84\%$), not a PP&E-only; rate — capturing software amortization and intangibles.

Source: SEC companyfacts — DepreciationDepletionAndAmortization / Revenue

Source URL: <https://data.sec.gov/api/xbrl/companyfacts/CIK0000814547.json>

Row 12: Interest % of Debt Open

What it is: Interest expense as % of opening debt balance.

How set in model: Excel equation: $I101/I98$ (FY25 interest ÷ FY25 opening debt in schedule).

Why this choice: Approximates average coupon / cost of debt on the book. Debt stock follows the net debt issuance assumption (row 19).

Source: SEC 10-K FY2025 — Interest expense; see also 8-K 6.250% notes

Source URL: <https://www.sec.gov/Archives/edgar/data/814547/000081454725000030/fico-20250930.htm>

Row 13: Book Tax Rate (% of EBT)

What it is: Effective book tax rate applied to forecast EBT → Net Income.

How set in model: Excel equation: $I35/I33$ (FY25 tax ÷ simplified FY25 EBT in this template).

Why this choice: Book rate (~19%) remains on the income statement. DCF unlevered cash taxes use a separate cash tax rate ($22.87\% = 3\text{yr IncomeTaxesPaidNet}/\text{EBT}$). DCF unlevered cash taxes use the 3yr average cash tax rate ($\text{IncomeTaxesPaidNet} \div \text{EBT} \approx 22.87\%$), not the book effective tax rate. The 3-statement income statement still applies book tax for NI.

Source: SEC 10-K FY2025 — tax expense; cash taxes from IncomeTaxesPaidNet

Source URL: <https://data.sec.gov/api/xbrl/companyfacts/CIK0000814547.json>

Row 15: DSO — Accounts Receivable (Days)

What it is: Days Sales Outstanding. $\text{AR} = \text{Revenue} \times \text{DSO} / 365$.

How set in model: Excel equation: $\text{ROUND}(\$J\$115,1) = \text{blended segment DSO} \approx 31.9 \text{ days (SaaS 45d / B2C 2d / B2B 30d / PS 15d / On-prem 45d} \times \text{FY25 mix})$.

Why this choice: MODEL11: Working Capital uses segment cash-conversion DSOs blended by FY2025 10-K revenue mix (SaaS, on-prem software, B2C myFICO, B2B Scores, Professional services). $\text{NWC} = \text{AR} + \text{Inventory} - \text{AP} - \text{Deferred Revenue (output)}$; $\Delta\text{NWC} = \text{NWCt} - \text{NWCt-1}$. Mix percentages offset within Total Revenue — they do not add a second revenue stack. FY2025 10-K disaggregation (\$000s): B2B Scores 948,595; B2C myFICO 219,980; SaaS software 419,720; on-premises software 320,425; Professional services 82,149 (sum = Total revenues 1,990,869). FICO Platform ARR was \$263.6M (35% of software ARR) at 9/30/2025 — ARR is a KPI, not an incremental IS line. SaaS/on-prem billings create Deferred Revenue (contract liability); B2C is near-zero DSO (card-settled); B2B Scores use ~30-day trade terms; Professional services convert cash quickly but at much lower gross margin (~28% vs software/scores). AR is organic from blended collections days — no top-down NWC% AR plug. Deferred Revenue is an explicit Balance Sheet liability included in Total Liabilities and in NWC ($= \text{AR} + \text{Inv} - \text{AP} - \text{Deferred}$). Forecast Deferred = Total Rev $\times$ (SaaS% + OnPrem%) $\times$ (FY25 Deferred $\div$ FY25 software revenue). Only software subscription / maintenance billings drive the liability — Scores and myFICO are not double-counted into Deferred.

Source: SEC 10-K FY2025 — Note 9 disaggregated revenue; payment terms 30–60 days

Source URL: <https://www.sec.gov/Archives/edgar/data/814547/000081454725000030/fico-20250930.htm>

Row 16: Inventory (Days)

What it is: Inventory days ($\text{Inv} = \text{COGS} \times \text{days}/365$).

How set in model: Hard zero — FICO is software / scores; inventory is immaterial.

Why this choice: No inventory cycle to fund.

Source: SEC 10-K FY2025 — Inventory $\approx$ \$0

Source URL: <https://www.sec.gov/Archives/edgar/data/814547/000081454725000030/fico-20250930.htm>

Row 17: DPO — Accounts Payable (Days)

What it is: Days Payable Outstanding. $\text{AP} = \text{COGS} \times \text{DPO} / 365$.

How set in model: Excel equation: $\text{ROUND}(\text{I48/I25} \times 365, 0)$ from FY25; held flat.

Why this choice: MODEL11: DPO is an explicit WC driver paired with DSO. $\text{NWC} = \text{AR} + \text{Inventory} - \text{AP} - \text{Deferred (output)}$; $\Delta\text{NWC} = \text{NWCt} - \text{NWCt-1}$.

Source: SEC 10-K FY2025 — Accounts payable

Source URL: <https://www.sec.gov/Archives/edgar/data/814547/000081454725000030/fico-20250930.htm>

Row 18: CapEx % of Revenue

What it is: Capital investment (PPE + capitalized software) as % of sales.

How set in model: Yellow POLICY input: flat 1.25% (3yr avg of PPE purchases + PaymentsToDevelopSoftware / Revenue).

Why this choice: MODEL11: CapEx uses a flat 3yr average of (PPE purchases + capitalized software) / Revenue ($\approx 1.25\%$). The prior hardcoded fade to 1% was removed so reinvestment reflects actual history rather than forcing CapEx $\approx$ D&A; by Year 5.

Source: SEC companyfacts — PPE purchases + PaymentsToDevelopSoftware

Source URL: <https://data.sec.gov/api/xbrl/companyfacts/CIK0000814547.json>

Row 19: Debt Issuance (Repayment)

What it is: New borrowing (+) or repayment (–) in the forecast (\$000s).

How set in model: Yellow POLICY input: -290,917 each year (3yr avg senior-note proceeds – line-of-credit repayments).

Why this choice: MODEL11: Financing CF restores realism outside FCFF: debt uses the 3yr average net debt cash flow (senior-note proceeds – line-of-credit repayments $\approx$ -\$291M/yr). Equity buybacks distribute residual levered FCF after that debt CF so cash does not artificially stockpile (historical buybacks averaged $\approx$ \$881M/yr in FY23–25). Financing is excluded from FCFF.

Source: SEC companyfacts — ProceedsFromIssuanceOfSeniorLongTermDebt / RepaymentsOfLinesOfCredit

Source URL: <https://data.sec.gov/api/xbrl/companyfacts/CIK0000814547.json>

Row 20: Equity Issued (Repaid)

What it is: New equity issued (+) or buybacks (–) in the forecast BS/CF.

How set in model: Equation: $-(\text{CFO} - \text{CapEx}) - \text{DebtIssuance}$ so residual levered FCF funds buybacks (hist 3yr avg buybacks $\approx$ \$881M/yr).

Why this choice: Restores financing realism so cash does not artificially stockpile. Buybacks are financing — excluded from FCFF. DCF \$/share uses SBC-diluted shares (row 16), not a static count. Starting diluted shares (D12) roll forward each forecast year: $\text{Shares}_t = \text{Shares}_{t-1} + \text{SBC}_t(\$000s) / \text{Current Price}$. SBC\$ comes from 3-statement row 64 (Rev $\times$ 8.25% SBC). Terminal Equity Value/Share uses Year-5 diluted shares, not the static starting share count.

Source: SEC companyfacts — PaymentsForRepurchaseOfCommonStock

Source URL: <https://data.sec.gov/api/xbrl/companyfacts/CIK0000814547.json>

Row 21: SBC % of Revenue

What it is: Stock-based compensation as % of sales; non-cash add-back in CFO and FCFF.

How set in model: Yellow POLICY input: flat 8.25% (3yr FY23–25 avg ShareBasedCompensation / Revenue).

Why this choice: MODEL11: Stock-Based Compensation is added back in CFO and FCFF at the 3yr average SBC/Revenue ($\approx$ 8.25%) from ShareBasedCompensation in the 10-K cash flow. DCF shares outstanding grow each year by SBC\$ / share price so Equity Value/Share reflects dilution from the SBC add-back. SBC\$ (3S row 64) also increases DCF diluted shares each year ($\Delta\text{Shares} = \text{SBC}\$000s / \text{Price}$).

Source: SEC 10-K cash flow — ShareBasedCompensation

Source URL: <https://data.sec.gov/api/xbrl/companyfacts/CIK0000814547.json>

Row 104: Mix % — SaaS / Platform software

What it is: Share of Total Revenue from SaaS / cloud software (incl. FICO Platform cloud).

How set in model: Yellow POLICY = 21.08% (FY25 SaaS \$419,720k / Total \$1,990,869k). Platform ARR KPI was \$263.6M (35% of software ARR) — ARR is not added on top of IS revenue.

Why this choice: SaaS is billed largely annually in advance → primary Deferred Revenue driver with on-prem maintenance. 30–60 day payment terms (model uses 45-day DSO). Mix offsets within Total Rev — does not create a second revenue line.

Source: SEC 10-K FY2025 — Software SaaS disaggregation + Platform ARR MD&A;

Source URL: <https://www.sec.gov/Archives/edgar/data/814547/000081454725000030/fico-20250930.htm>

Row 105: Mix % — B2C Subscriptions (myFICO)

What it is: Share of Total Revenue from B2C scoring / myFICO.com subscriptions.

How set in model: Yellow POLICY = 11.05% (FY25 B2C Scores \$219,980k / Total \$1,990,869k).

Why this choice: Near-zero DSO (card-settled consumer subscriptions). Minimal Deferred Revenue vs annual SaaS invoices. High incremental margin; WC-light cash conversion.

Source: SEC 10-K FY2025 — Scores segment B2C / myFICO disaggregation

Source URL: <https://www.sec.gov/Archives/edgar/data/814547/000081454725000030/fico-20250930.htm>

Row 106: Mix % — B2B Scores

What it is: Share of Total Revenue from B2B scoring (mortgage, auto, card via CRAs).

How set in model: Yellow POLICY = 47.65% (FY25 B2B Scores \$948,595k / Total \$1,990,869k).

Why this choice: Transactional volume through Experian/TransUnion/Equifax; ~30-day DSO. Does not create SaaS-style Deferred Revenue (usage-based recognition).

Source: SEC 10-K FY2025 — Scores segment B2B disaggregation

Source URL: <https://www.sec.gov/Archives/edgar/data/814547/000081454725000030/fico-20250930.htm>

Row 107: Mix % — Professional Services

What it is: Share of Total Revenue from implementation / consulting / training fees.

How set in model: Yellow POLICY = 4.13% (FY25 PS \$82,149k / Total \$1,990,869k).

Why this choice: Upfront integration fees convert cash quickly (low DSO) but carry significantly lower gross margin than software/scores — pulls blended COGS up vs pure SaaS.

Source: SEC 10-K FY2025 — Software segment Professional services line

Source URL: <https://www.sec.gov/Archives/edgar/data/814547/000081454725000030/fico-20250930.htm>

Row 108: Mix % — On-Premises Software

What it is: Share of Total Revenue from on-premises license + maintenance software.

How set in model: Yellow POLICY = 16.09% (FY25 on-prem \$320,425k / Total \$1,990,869k).

Why this choice: With SaaS mix, drives Deferred Revenue (maintenance billed in advance). Same 45-day DSO policy as SaaS. Completes mix identity to 100% of Total Rev.

Source: SEC 10-K FY2025 — Software on-premises vs SaaS deployment table

Source URL: <https://www.sec.gov/Archives/edgar/data/814547/000081454725000030/fico-20250930.htm>

B. DCF Assumptions

DCF-D5: Cash Tax Rate (unlevered)

What it is: Cash tax rate used for FCFF unlevered taxes and after-tax cost of debt.

How set in model: Yellow POLICY = 22.87% (3yr avg IncomeTaxesPaidNet ÷ EBT). NOT linked to book tax J13.

Why this choice: DCF unlevered cash taxes use the 3yr average cash tax rate (IncomeTaxesPaidNet ÷ EBT ≈ 22.87%), not the book effective tax rate. The 3-statement income statement still applies book tax for NI.

Source: SEC companyfacts — IncomeTaxesPaidNet / EBT

Source URL: <https://data.sec.gov/api/xbrl/companyfacts/CIK0000814547.json>

DCF-D6: WACC (discount rate)

What it is: Weighted average cost of capital for XNPV of FCFF + TV.

How set in model: CAPM live formula ≈ 9.24% ($W_e \times K_e + W_d \times R_d(1-t)$).

Why this choice: Market-consistent discount rate from R_f , β , ERP, and note coupon.

Source: FRED DGS10 / Damodaran ERP / Yahoo β / 8-K 6.250% notes

Source URL: <https://fred.stlouisfed.org/series/DGS10>

DCF-D7: Perpetual Growth (g)

What it is: Long-run growth used only in the Gordon TV cross-check.

How set in model: POLICY input = 3.0%.

Why this choice: Long-run nominal GDP-like floor; primary TV uses exit multiple.

Source: Damodaran long-run growth framing

Source URL: https://pages.stern.nyu.edu/adamodar/New_Home_Page/datafile/histimpl.html

DCF-D8: Exit EV/EBITDA (BASE)

What it is: Terminal enterprise value multiple on Year-5 EBITDA.

How set in model: POLICY BASE 17.5x; Bull 25.0x; Bear 12.8x. Peer set: EFX 13.88x, VRSK 17.42x, SPGI 18.11x, MCO 22.20x, MSCI 23.74x. Median ≈ 18.11x.

Why this choice: Base 17.5x is near the public peer median (18.1x), between Gordon-implied bear and spot/bull.

Source: VCP Scanner FICO peer EV/EBITDA comps

Source URL: <https://vcpscanner.com/valuation/fico/relative>

DCF-D13/D14: Debt & Cash (equity bridge)

What it is: Gross debt and cash+marketable securities for EV → equity.

How set in model: Latest 10-Q bridge totals (more current than FY25 3S balances).

Why this choice: Bridge should reflect the latest capital structure; 3S FY25 shown as reference.

Source: SEC 10-Q — Fair Isaac Corp

Source URL: <https://www.sec.gov/Archives/edgar/data/814547/000081454725000016/fico-20250331.htm>

DCF-D12/I16: Shares Outstanding (SBC dilution)

What it is: Starting diluted shares (D12) roll forward each year by $\text{SBC\$} \div \text{share price}$; Equity Value/Share uses Year-5 diluted shares (I16).

How set in model: $\text{D16} = \text{D\$12}$; $\text{E16:I16} = \text{prior} + 3\text{S!}\{J-N\}64 / \text{D\$11}$; $\text{D37} = \text{D\$35} / \text{I\$16}$.

Why this choice: Starting diluted shares (D12) roll forward each forecast year: $\text{Shares}_t = \text{Shares}_{t-1} + \text{SBC}_t(\$000s) / \text{Current Price}$. SBC\$ comes from 3-statement row 64 ($\text{Rev} \times 8.25\% \text{ SBC}$). Terminal Equity Value/Share uses Year-5 diluted shares, not the static starting share count.

Source: 3S SBC row 64 ($\text{Rev} \times 8.25\%$); SEC ShareBasedCompensation

Source URL: <https://data.sec.gov/api/xbrl/companyfacts/CIK0000814547.json>

DCF-E25: ΔNWC (includes Deferred Revenue)

What it is: $\text{Change in NWC} = \text{AR} + \text{Inventory} - \text{AP} - \text{Deferred Revenue}$. Linked live from 3S row 90 into FCFF.

How set in model: $\text{DCF E25:I25} = 3\text{S!J90:N90}$ (organic WC schedule).

Why this choice: Deferred Revenue is an explicit Balance Sheet liability included in Total Liabilities and in NWC ($= \text{AR} + \text{Inv} - \text{AP} - \text{Deferred}$). Forecast Deferred = $\text{Total Rev} \times (\text{SaaS\%} + \text{OnPrem\%}) \times (\text{FY25 Deferred} \div \text{FY25 software revenue})$. Only software subscription / maintenance billings drive the liability — Scores and myFICO are not double-counted into Deferred.

Source: SEC 10-K FY2025 — Deferred revenue / contract liabilities

Source URL: <https://www.sec.gov/Archives/edgar/data/814547/000081454725000030/fico-20250930.htm>

This PDF is the canonical printable assumptions list for the workbook. Filings and data sources remain clickable in Excel columns U/V; column W on every assumption row links back to this file.
